英文課文改寫題組　綜合練習卷

綜合測驗 30 題 ＋ 文意選填 60 題
共 90 題，每題 1 分　CEFR B1–B2

班級：　　座號：　　姓名：　　得分：　　／90

選文來源（依課本順序）：**1.** The Secret Lives of Plants　**2.** When Dreams Led to Scientific Breakthroughs　**3.** The City That Never Sleeps: Discovering New York City　**4.** Dress to De-Stress: How the Clothes You Wear Can Impact Your Mood　**5.** Kjell Lindgren: How a Kid from Taipei Reached the Stars　**6.** Anesthesia: The Discovery That Transformed Medicine

第壹部分　綜合測驗 第 1–30 題

說明：第 1 題至第 30 題，每題一個空格，請依文意選出最適當的一個選項，並將答案填入試卷最後的答案欄。每題答對得 1 分，答錯或未作答不倒扣。

第 1 至 5 題為題組

改寫自〈The Secret Lives of Plants〉植物的祕密生活

Most of us think of plants as silent, passive living things that simply stand where they are planted. Yet decades of research have shown that plants are far from ＿1＿. In fact, many of them have developed surprising ways to protect themselves and even to help one another.

When a caterpillar starts chewing on a tobacco leaf, for example, the plant releases chemicals into the air. Neighboring plants that ＿2＿ these airborne signals start producing substances that make their own leaves taste bitter—often before the insects even reach them. ＿3＿, a warning from a single plant can help protect a whole field.

Cooperation also takes place beneath the forest floor, where tree roots are linked by vast fungal networks. Ecologist Suzanne Simard discovered that large, healthy trees use these networks to send extra sugar to young trees growing in deep shade, where there is too little sunlight for them to ＿4＿ enough food on their own.

Desert plants show a different kind of wisdom. Water is precious in the burning heat, so cacti keep their tiny pores tightly closed all day. Only when the sun goes down ＿5＿ them to take in the carbon dioxide they need. Seen this way, plants are not simple creatures at all; they are quiet but clever survivors.

1.	(A) inventive	(B) fascinating	(C) helpless	(D) essential
2.	(A) detect	(B) protect	(C) neglect	(D) reflect
3.	(A) For instance	(B) In other words	(C) Even so	(D) On the contrary
4.	(A) consume	(B) produce	(C) reduce	(D) conserve
5.	(A) cacti open	(B) cacti do open	(C) do cacti open	(D) opening cacti

第 6 至 10 題為題組

改寫自〈When Dreams Led to Scientific Breakthroughs〉當夢境引領科學突破

We often imagine scientific discoveries being made in bright laboratories, through long hours of careful ___6___. Surprisingly, some of the greatest breakthroughs came to scientists while they were fast asleep.

In 1869, the Russian chemist Dmitri Mendeleev spent days trying to arrange the chemical elements in a logical order. Exhausted, he fell asleep at his desk and dreamed of a table in which every element fell into place. As soon as he woke up, he wrote down what he had seen. ___7___, the periodic table was born.

A few years earlier, August Kekulé had faced a similar challenge. He could not ___8___ out the structure of benzene until one night he dreamed of a snake biting its own tail. The image of a circle ___9___ him to suggest that the molecule was shaped like a ring.

Why do such moments happen? Scientists believe the brain keeps sorting information even while we sleep. ___10___ by logic or doubt, a sleeping mind is free to form connections that we might never make while awake.

6.	(A) calculation	(B) imagination	(C) relaxation	(D) celebration
7.	(A) By contrast	(B) Otherwise	(C) In this way	(D) Even so
8.	(A) carry	(B) turn	(C) give	(D) figure
9.	(A) prevented	(B) prompted	(C) protected	(D) promised
10.	(A) Not limited	(B) Not limiting	(C) Limited not	(D) Without limited

第 11 至 15 題為題組

改寫自〈The City That Never Sleeps: Discovering New York City〉不夜城：探索紐約市

New York City is famous for never slowing down. Its sidewalks are always ___11___ with people, from office workers rushing to meetings to tourists taking photos of tall buildings. ___12___, the city also offers quiet corners where visitors can escape the noise.

The High Line is a good example. Built on an old railway above the streets, this narrow park lets visitors enjoy the peaceful ___13___ of trees and flowers while the busy traffic moves below.

In the evening, many travelers head to Broadway, where the theater lights shine until midnight. It is the powerful live performances, not just the bright lights, ___14___ keep audiences coming back year after year.

Not every famous site is about fun, though. At the 9/11 Memorial & Museum, visitors quietly ___15___ the nearly 3,000 people who lost their lives in the 2001 terrorist attacks.

11.	(A) familiar	(B) satisfied	(C) equipped	(D) crowded
12.	(A) Similarly	(B) As a result	(C) In short	(D) Nevertheless
13.	(A) belongings	(B) boundaries	(C) surroundings	(D) proceedings
14.	(A) that	(B) what	(C) which they	(D) where
15.	(A) celebrate	(B) entertain	(C) imitate	(D) honor

第 16 至 20 題為題組

改寫自〈Dress to De-Stress: How the Clothes You Wear Can Impact Your Mood〉穿出好心情、甩掉壓力：服裝如何左右你的情緒

Have you ever changed your outfit three times before leaving home because nothing felt right? If so, you are not alone. Many people now believe that clothes can ___16___ their mood as well as their appearance. This idea, known as "dopamine dressing," suggests that wearing clothes we love can actually make us feel happier.

The idea is not as strange as it sounds. When we do something we enjoy, the brain releases dopamine, a chemical linked to pleasure. Putting on a favorite outfit can ___17___ the same reaction.

Color matters, too. Blue tends to make people feel calm and relaxed. Red, ___18___, can raise a person's heart rate and make them feel more alert.

Even the type of clothing can change the way we think. In one well-known study, participants who wore white lab coats did better on attention tests than ___19___ wearing their everyday clothes. The researchers believe the coats made the wearers feel more careful and ___20___, since such coats are closely associated with doctors and scientists.

16. (A) effect (B) infect (C) protect (D) affect

17. (A) reduce (B) trigger (C) resist (D) replace

18. (A) on the other hand (B) in other words (C) for this reason (D) as a result

19. (A) that (B) those (C) them (D) these

20. (A) casual (B) relaxed (C) focused (D) nervous

第 21 至 25 題為題組

改寫自〈Kjell Lindgren: How a Kid from Taipei Reached the Stars〉林琪兒：從臺北走向星辰的太空人

Kjell Lindgren knew what he wanted to be long before most children his age had even thought about their future. At just 11, he applied to the US Air Force Academy. He never heard back, but instead of giving up, he became even more ___21___ to reach space.

After college, he began training to become a pilot, only to be disqualified because of asthma. Many people would have ___22___ their dream at that point. Lindgren, ___23___, simply chose a different route. He earned a medical degree, trained in aerospace medicine, and worked as a flight surgeon at NASA.

His hard work finally paid off in 2009, when NASA selected him as one of only nine astronaut ___24___ from about 3,500 applicants. ___25___ after his first disappointment, he would never have flown to the International Space Station—twice.

21. (A) frightened (B) determined (C) exhausted (D) qualified

22. (A) achieved (B) announced (C) abandoned (D) approached

23. (A) for example (B) therefore (C) in other words (D) however

24. (A) commanders (B) colleagues (C) candidates (D) surgeons

25. (A) If he gave up (B) Had he given up (C) Did he give up (D) Were he to give up

第 26 至 30 題為題組

改寫自〈Anesthesia: The Discovery That Transformed Medicine〉麻醉：改寫醫學史的重大發現

Imagine having a leg removed while you are wide awake. Before the mid-1800s, this was the ___26___ faced by countless patients. Surgeons had no reliable way to ___27___ pain, so they tried to work as fast as possible. Some could remove a leg in under 30 seconds. ___28___, the pain was almost unbearable, and patients often had to be held down by several strong men.

Everything changed in 1846, when an American dentist named William Morton gave a patient ether before an operation. ___29___ the gas, the patient slept peacefully through the entire procedure. When he woke up, he ___30___ that he had not felt any pain at all. The news spread quickly, and within weeks, surgeons in London were using ether too.

26.	(A) fantasy	(B) opportunity	(C) reality	(D) solution
27.	(A) receive	(B) reveal	(C) relate	(D) relieve
28.	(A) Therefore	(B) Likewise	(C) For instance	(D) Still
29.	(A) Having inhaled	(B) Inhaled	(C) Being inhaled	(D) To inhale
30.	(A) confirmed	(B) confessed	(C) conferred	(D) conformed

第貳部分　文意選填 第 31–90 題

說明：第 31 題至第 90 題，每題組共十個空格，請依文意在各題組文章後所提供的 (A) 到 (J) 選項中分別選出最適當者。每個選項在同一題組中只能使用一次。每題答對得 1 分，答錯或未作答不倒扣。

第 31 至 40 題為題組

改寫自〈The Secret Lives of Plants〉植物的祕密生活

Plants may look quiet and simple, but scientists keep discovering that they are far more clever than we once believed. Many of their survival tricks challenge ＿31＿ ideas about what plants can and cannot do.

Take the sacred lotus, for example. Unlike most plants, it can ＿32＿ its own heat by turning stored energy into warmth. This heat helps the flower send its sweet ＿33＿ into the air, and the smell draws in insects that carry pollen from flower to flower.

Plants can also help one another. Beneath the forest floor, tree roots are linked by fungal networks. Through these hidden connections, older trees pass ＿34＿ to younger ones growing in the shade, giving them the food they need to stay alive.

In the desert, life is especially ＿35＿: rain seldom falls, and the midday sun can burn anything left in the open. For cacti, it is ＿36＿ to ＿37＿ every drop of water they have. That is why they keep their tiny pores closed during the day and open them only at night. Through these open pores, they ＿38＿ carbon dioxide from the cool night air while losing far less water than they would under the burning sun.

Even the greatest trees have limits. The taller a tree grows, the harder it is to lift water from its roots to its highest leaves. As a result, even the giant coastal redwood rarely manages to ＿39＿ 130 meters.

Sunflowers offer one last surprise. Young sunflowers turn their heads to follow the sun across the sky. Once they are fully grown, however, they give up this ＿40＿ and face east all day, which lets them warm up quickly each morning and welcome early-visiting insects.

(A) absorb	**(B)** behavior	**(C)** conserve	**(D)** conventional	**(E)** essential
(F) exceed	**(G)** generate	**(H)** harsh	**(I)** nutrients	**(J)** scents

第 41 至 50 題為題組

改寫自〈When Dreams Led to Scientific Breakthroughs〉當夢境引領科學突破

Some of the most important scientific ___41___ did not happen in a laboratory at all. Instead, they began as ___42___ images in the minds of sleeping researchers.

The Indian mathematician Srinivasa Ramanujan is a well-known example. He often said that complex mathematical ___43___ appeared to him in his dreams, as if written by an invisible hand. Many of them were so advanced that experts needed years to prove they were correct.

The Danish physicist Niels Bohr had a similar experience. He is said to have dreamed of electrons that ___44___ the center of an atom, just as planets circle the sun. The dream helped him turn an ___45___ idea into a simple picture that students could easily ___46___. His ___47___ to our understanding of the atom later earned him the Nobel Prize in Physics.

Why do dreams sometimes lead to such ___48___ ideas? Scientists believe that sleep strengthens memory and helps the brain ___49___ links between pieces of information that seem unrelated during the day. When we relax, the mind can wander freely and gain sudden ___50___ into problems we could not solve while awake.

(A) abstract	**(B)** breakthroughs	**(C)** contributions	**(D)** forge	**(E)** formulas
(F) groundbreaking	**(G)** insights	**(H)** orbit	**(I)** striking	**(J)** visualize

第 51 至 60 題為題組

改寫自〈The City That Never Sleeps: Discovering New York City〉不夜城：探索紐約市

Few cities offer as much variety as New York. A short trip can include world-class shows, famous shopping streets, and some of the most exciting sports events in the country. The following places ___51___ why the city attracts millions of travelers every year.

On Broadway, top ___52___ sing, dance, and act in front of full theaters every night. Their ___53___ performances make it almost impossible for audiences to look away. A few blocks east, Fifth Avenue welcomes shoppers looking for high-end fashion. During the holiday season, its shop windows are ___54___ decorated with lights, ribbons, and moving figures.

For something quieter, visitors can stroll along the High Line, a park known for its ___55___ design, which turns an old railway into a garden in the sky. Those who prefer a creative scene often head to SoHo. Art ___56___, small boutiques, and stylish cafés ___57___ its streets, while many old buildings still show off 19th-century ___58___. The neighborhood's relaxed, artistic ___59___ makes it a favorite spot for young designers.

Finally, sports fans should not miss Yankee Stadium, home to one of the most famous ___60___ baseball teams in the world.

(A) architecture	**(B)** atmosphere	**(C)** compelling	**(D)** elaborately	**(E)** galleries
(F) highlight	**(G)** imaginative	**(H)** line	**(I)** performers	**(J)** professional

第 61 至 70 題為題組

改寫自〈Dress to De-Stress: How the Clothes You Wear Can Impact Your Mood〉穿出好心情、甩掉壓力：服裝如何左右你的情緒

Most of us open our __61__ every morning without thinking much about what we pick. Yet psychologists say our clothing choices may shape how we feel all day. “Dopamine dressing” is based on the idea that certain outfits can __62__ our mood when we are feeling down, much like the pleasure we feel when we __63__ a difficult goal.

Color is another key factor. Different __64__ are connected with different emotions: blue often suggests calm, while brown signals __65__. Clothes can also shape our __66__—the way we think and behave. For example, people who wear clothing linked to focus and precision may actually concentrate better.

These ideas are easy to put into practice. Before an important interview, a more __67__ outfit may help you feel capable and confident. When you lack the __68__ to study at home, simply changing out of your pajamas could make a difference. And wearing colors you already connect with energy will likely __69__ that feeling.

In short, your closet is one of the most __70__ tools you have for managing your emotions—and it is right there in your bedroom.

(A) accessible	**(B)** accomplish	**(C)** boost	**(D)** hues	**(E)** mindset
(F) motivation	**(G)** polished	**(H)** reinforce	**(I)** stability	**(J)** wardrobe

第 71 至 80 題為題組

改寫自〈Kjell Lindgren: How a Kid from Taipei Reached the Stars〉林琪兒：從臺北走向星辰的太空人

Kjell Lindgren’s road to space was anything but smooth. After losing his chance to become a pilot, he __71__ his plans and turned to medicine. He earned a medical degree and then completed training in __72__ medicine, a field that studies how flight affects the human body.

His __73__ finally paid off. On July 22, 2015, he __74__ on his first mission to the International Space Station (ISS). During his time there, he __75__ experiments on how long periods in space affect human health and plant growth.

Seven years later, he returned to the ISS—this time as __76__, responsible for leading the entire crew. Among the studies he worked on was research into how microgravity affects the __77__ system, which protects our bodies from disease.

Lindgren is also known for his warm personality. When a __78__ passed away in 2015, he played “Amazing Grace” on the bagpipes aboard the ISS in memory of his friend. Back on Earth, he has taken a strong __79__ on protecting the environment. Seeing our planet from orbit, he says, made it clear that its resources are __80__—and that we must take care of the only home we have.

(A) aerospace	**(B)** colleague	**(C)** commander	**(D)** conducted	**(E)** finite
(F) immune	**(G)** launched	**(H)** persistence	**(I)** revised	**(J)** stance

第 81 至 90 題為題組

改寫自〈Anesthesia: The Discovery That Transformed Medicine〉麻醉：改寫醫學史的重大發現

Of all the ___81___ of the past two centuries, few have reduced human suffering as much as anesthesia. Before it existed, an operation was a ___82___ experience. Patients stayed fully awake, and strong men had to hold them down as they screamed in ___83___.

In 1846, an American dentist showed that ether could put a patient to sleep during a painful ___84___. To many people, it seemed almost ___85___: for the first time, patients could sleep through an operation and wake up without remembering any pain.

Ether, however, had problems. Breathing it in often made patients cough or ___86___, and it could easily catch fire. Doctors soon switched to chloroform, but choosing the right ___87___ was difficult: too little would not work, while too much could kill. The English physician John Snow carefully tested different amounts and became so confident that he even gave chloroform to Queen Victoria.

Today, anesthesia is an ___88___ part of modern medicine. Every year, millions of people ___89___ surgery safely and comfortably. The benefits are ___90___, yet we rarely stop to think about how lucky we are.

(A) agony	**(B)** dose	**(C)** established	**(D)** innovations	**(E)** massive
(F) miraculous	**(G)** procedure	**(H)** terrifying	**(I)** undergo	**(J)** vomit

答案欄

班級：＿＿＿＿＿＿　座號：＿＿＿＿　姓名：＿＿＿＿＿＿　得分：＿＿＿／90
